

Peter has been working with computers, IT technology and programming software since 1972. With that wealth of experience coupled with his unique and analytical business planning abilities, Peter turns our graphical designs, artistic flair and marketing ideas into eye-catching, fully functional, interactive websites.

Peter has undertaken projects on five continents for many household name products, international banks, governments, publicly traded companies and smaller operations. He has five US-Copyrighted and registered software titles to his name and has been involved in the design, build and implementation of several integrated, relational databases for companies in the US, UK, Africa, Asia and Europe. Educated in England at the Hugh Christie College of Technology and at West Kent College, Peters computer skills have taken him all over the world.

## Most Memorable Moment

Of course there are many memorable moments in my family life. However the most memorable of my professional life must be working on a robotic, solar powered water filtration system in the jungles of West Africa. The project was 310 miles upriver and 220 miles from the nearest telephone. I met my wife “Rusty” while in the Gambia. She was training flight attendants for Gambia Airways and I was writing computer code.
